

Tempnur Care Carbon Reduction Plan 2024.

Our Carbon Reduction Plan is a detailed document that sets out our goals, strategies, and timelines for reducing greenhouse gas emissions across all aspects of our business. This includes energy consumption, waste management, transportation, and procurement.

Key Features of the Plan:

Energy Efficiency: Implementation of energy-efficient lighting, heating, and cooling systems in our facilities.

Waste Management: Strategies for reducing company waste and increasing recycling rates, including the use of biodegradable medical supplies where necessary for relevant service deliveries

Transportation: We are transitioning to electric vehicles for all company-related transport needs and encourage staff to use public transport where effective and appropriate regarding our domiciliary dispersed workforce.

Procurement: We prefer working with third party suppliers who have strong environmental credentials and can provide sustainably-produced goods.

Monitoring and Reporting:

We have established a set of key performance indicators (KPIs) to monitor our progress. These KPIs are reviewed quarterly, and an annual sustainability report is published to update stakeholders on our achievements and future plans.

Our Carbon Reduction Plan is publicly available on www.tempnur.co.uk

By developing and publishing this plan, we aim to demonstrate our commitment to environmental stewardship and contribute to global efforts to mitigate climate change. We believe that healthcare providers have a role to play in creating a sustainable future, and we are committed to leading by example in this crucial endeavour.
